

Mayank Joshi

joshimayanknitin@gmail.com | linkedin.com/in/mayanknjoshi | github.com/May-Jo | Pune, India

EDUCATION

Vishwakarma Institute of Technology (VIT), Pune

B.Tech in Computer Science & Engineering (AI & ML)

2025 -- 2029

Pune, India

- CGPA: 9.55 / 10
- Relevant Coursework: DBMS, Computer Organization & Architecture, Data Structures & Algorithms, Web Development

PROJECTS

Smart Parking System -- ESP32-CAM & TinyML

Dec. 2024 -- Feb. 2025

- Built a smart parking detection system as part of an SRM (Scientific Research Methods) project, using an ESP32-CAM for image capture
- Trained and deployed a TensorFlow (TinyML) model on-device to classify each parking slot as filled or empty from camera frames
- Synced slot status to Firebase and built a basic HTML website to display live fill/empty status for each slot

CanteenIQ -- Canteen Ordering Platform

Apr. 2025 -- June 2025

- Built a multi-page canteen ordering platform for VIT using vanilla HTML/CSS/JavaScript with OOP design patterns
- Used jQuery for DOM handling and GSAP for scroll and page-transition animations to keep the ordering flow smooth
- Designed the multi-page layout and navigation from scratch without a framework, handling menu browsing, cart, and order flow
- Platform was of much help to the canteen owner as taken feedback from him

LLM Tutor & Webpage Summarizer -- Learning Projects

Apr. 2025

- Built two independent local-AI tools to learn LLM application development: an interactive tutor and a webpage/article summarizer
- Ran Llama 3.1 8B locally via Ollama on a RTX 5050 (8GB VRAM), designing system/user prompt structures and wiring each tool to a lightweight backend API

ClimateGuard -- Climate Risk Simulator (Hackathon)

Mar. 2025

- Built an India district-level climate risk simulator at a hackathon, pairing a Flask/ML backend with an interactive front-end
- Trained Gradient Boosting models to estimate flood risk and AQI at the district level, and served predictions through the Flask API
- Built an interactive Leaflet.js choropleth map with state-to-district drill-down, styled around a custom sci-fi "Obsidian Observatory" UI theme

ACHIEVEMENTS

- Placed 1st in a duo-format competitive programming competition (FY category), competing solo against two-person teams
- Ranked under 10 in branch academics
- Advanced to the final rounds of Tesseract '26

LEADERSHIP & EXTRACURRICULAR

CEO, Business Strategy Competition

2025

- Led a team as CEO in a case-based business competition centered on an Uber crisis/negotiation scenario, structuring team strategy and delivering the final pitch

Class Representative

2025 -- Present

- Serve as a point of contact between the class and faculty, coordinating academic scheduling, announcements, and student feedback

Fest Volunteer

2025

- Volunteered at a college fest, supporting on-ground event coordination and logistics

SKILLS

Languages: C, Python, JavaScript, SQL

Frameworks/Tools: MySQL, MongoDB, Flask, jQuery, GSAP, Firebase, Git

Other: Ollama / local LLM inference, TensorFlow (TinyML), ESP32, Notion, Figma
